

FOR IMMEDIATE RELEASE

Teledex ExpressNet® Surpasses 125,000 Rooms in Service

Award-winning broadband solutions continue to gain significant market share

SAN JOSE, Calif. (November 12, 2007) --- Teledex, the leading worldwide provider of guest room telephones for the hospitality industry, today announced its award-winning ExpressNet® high speed Internet solution family has surpassed 125,000 rooms in service. The number of rooms in service includes rooms served by wired ExpressNet and wireless ExpressNet AirLink solutions.

Released in November, 2002, Teledex ExpressNet has been the recipient of major industry awards for its innovative design and outstanding performance characteristics. ExpressNet is the preferred broadband solution for many of the world's best-known hotel groups in all segments of the industry, from economy lodging to luxury hotels and resorts. Besides broadband access gear, Teledex also offers comprehensive 24/7 ExpressNet support services for guests and administrative staff, as well as professional site survey and installation services.

The Teledex ExpressNet solution family offers several significant advantages over competing broadband solutions, including:

Patented ExpressPort adapter

ExpressNet access points are installed to the underside Teledex phones utilizing the patented Teledex ExpressPort device, which snaps to the bottom of virtually all Teledex hospitality phones. This integrated installation method conserves precious desktop space (by eliminating the need for an additional device to be placed on the desk), and eliminates the tangled wire confusion that can be problematic with competing solutions.

VDSL technology uses existing CAT 2/3 phone wiring

Using a property's existing CAT 2/3 cable infrastructure, ExpressNet broadband solutions deliver blazing fast connection speeds, for guest to surf the Internet and use email, as well as for administrative or other back office applications. By using Teledex ExpressNet, hotels eliminate the need to re-cable their building, providing significant installation savings. And, because ExpressNet uses the phone wiring, adding additional wireless hot spots is as easy as plugging in an AirLink wireless access point wherever a working phone jack is located, anywhere in the hotel.

About Teledex

Now in its third decade, Teledex has shipped over 10 million guestroom telephones to over 125 countries, and is the preferred supplier of guestroom telephones to all major global hotel chains, as well as a number of other multinational corporations. Teledex's award-winning ExpressNet® solutions deliver reliable, high performance high-speed Internet solutions at very affordable costs. Teledex's innovative iPhone VoIP solutions put cutting-edge VoIP features within the reach of any hotel, anywhere. For more information, please visit www.teledex.com.
